# 1. GETTING STARTED

## What's In The Box?

- 1 x Colorise™ Infiniwhite Professional LED PAR Fixture
- An Ever-So-Handy Power Cord
- One Really Classy DMX Cable
- This Lovely User Manual

## Getting It Out Of The Box

Congratulations on the purchase of your new totally sweet Colorise™ Infiniwhite LED par fixture. She's a real stunner alright, definitely the cat's pajamas! Now that you've got your Colorise™ Infiniwhite (or hopefully, *Colorises!*), you should carefully unpack the box and check the contents to ensure that all parts are present and in good condition. If anything looks as if it has been damaged in transit, notify the shipper immediately and keep the packing material for inspection. Again, please save the carton and all packing materials. If a fixture must be returned to the factory, it is important that the fixture be returned in the original factory box and packing.

## Powering Up!

All fixtures must be powered directly off a switched circuit and **cannot be run off a rheostat (variable resistor) or dimmer circuit, even if the rheostat or dimmer channel is used solely for a 0% to 100% switch.**

*AC Voltage Switch* - Not all fixtures have a voltage select switch, so please verify that the fixture you receive is suitable for your local power supply. See the label on the fixture or refer to the fixture's specifications chart for more information. A fixture's listed current rating is its average current draw under normal conditions. Check the fixture or device carefully to make sure that if a voltage selection switch exists that it is set to the correct line voltage you will use.

**Warning! Verify that the voltage select switch on your unit matches the line voltage applied. Damage to your fixture may result if the line voltage applied does not match the voltage indicated on the voltage selector switch. All fixtures must be connected to circuits with a suitable Ground (Earthing).**

## Getting A Hold Of Us

**If something is wrong, please just visit our website at [www.blizzardlighting.com/support](http://www.blizzardlighting.com/support) and open a support ticket. We'll be happy to help, honest.**

**Disclaimer:** The information and specifications contained in this document are subject to change without notice. Blizzard Lighting™ assumes no responsibility or liability for any errors or omissions that may appear in this user manual. Blizzard Lighting™ reserves the right to update the existing document or to create a new document to correct any errors or omissions at any time. You can download the latest version of this document from [www.blizzardlighting.com](http://www.blizzardlighting.com).

# SAFETY INSTRUCTIONS

Please read these instructions carefully. They include important information about the installation, usage and maintenance of this product.

- Please keep this User Guide for future use. If you sell the unit to someone else, be sure that they also receive this User Guide.
- ALWAYS make sure that you are connecting to the proper voltage, and that the line voltage you are connecting to is not higher than that stated on the decal or rear panel of the fixture.
- This product is intended for indoor use only.
- To prevent risk of fire or shock, do not expose fixture to rain or moisture.
- Make sure there are no flammable materials close to the unit while operating.
- The unit must be installed in a location with adequate ventilation, at least 20in (50cm) from adjacent surfaces. Be sure that no ventilation slots are blocked.
- ALWAYS disconnect from the power source before servicing or replacing fuse and be sure to replace with same fuse size and type.
- ALWAYS secure fixture using a safety chain. NEVER carry the fixture by its cord. Use its carrying handles.
- DO NOT operate at ambient temperatures higher than 104°F (40°C).
- In the event of a serious operating problem, stop using the unit immediately. NEVER try to repair the unit by yourself. Repairs carried out by unskilled people can lead to damage or malfunction. Please contact the nearest authorized technical assistance center. Always use the same type spare parts.
- NEVER connect the device to a dimmer pack.
- Make sure the power cord is never crimped or damaged.
- Never disconnect the power cord by pulling or tugging on the cord.
- Avoid direct eye exposure to the light source while it is on.

**Caution!** There are no user serviceable parts inside this unit. Do not open the housing or attempt any repairs yourself. In the unlikely event your unit may require service, please visit <http://www.blizzardlighting.com/support>.

# 2. MEET THE COLORISE™ INFINIWHITE LED PAR

## MAIN FEATURES

- 18x 5W 3-in-1 ACW LEDs, 100,000 hours
- Built-in AnyFi™ wireless DMX receiver (Skywire™ or W-DMX™)
- Achieve white color temperatures from 2600k-7500k
- Natural convection cooled, totally silent operation
- User selectable 32-bit dimming curves
- Variable electronic dimmer strobe
- Built-in color & chase macros via DMX
- Built-in auto programs & sound active in standalone and M/S
- Color mixing ability in standalone mode
- 25 degree beam angle
- User selectable 3/4 or 7-channel DMX modes
- Flicker-free constant-current LED driver
- LED control panel with 4\* touch sensitive buttons
- 3/5-pin male input and 3/5-pin female output
- PowerCon™ compatible AC power In/Out connectors

### DMX Quick Reference - 7-Channel Mode

Channel	7-Channel
1	Dimmer
2	Amber Intensity
3	Warm White Intensity
4	Cool White Intensity
5	Strobe
6	Custom Colors + Auto
7	32-bit Dimming

### DMX Quick Reference - 4/3-Channel Modes

Channel	4-Channel	3-Channel
1	Dimmer	Amber Intensity
2	Amber Intensity	Warm White Intensity
3	Warm White Intensity	Cool White Intensity
4	Cool White Intensity	---

**Figure 1: The Colorise™ Infiniwhite Pin-Up Picture**

**Figure 2: The Rear Connections**

### 3. SETUP

Before replacing a fuse, disconnect power cord. ALWAYS replace with the same type and rating of fuse.

#### Fuse Replacement

**CAUTION!** The Colorise™ Infiniwhite utilizes a high-output switch-mode power supply with an internal fuse. Under normal operating conditions, the fuse should not require replacement. The fuse is field replaceable, however it is an advanced procedure suited to qualified individuals. Should your fixture require replacement, please contact Blizzard Lighting for instructions, or to return your unit for service.

#### Connecting A Bunch of Colorise™ Infiniwhite Fixtures

You will need a serial data link to run light shows using a DMX-512 controller or to run shows on two or more fixtures set to sync in master/slave operating mode. The combined number of channels required by all the fixtures on a serial data link determines the number of fixtures the data link can support.

Fixtures on a serial data link must be daisy chained in one single line. Also, connecting more than 32 fixtures on one serial data link without the use of a DMX optically-isolated splitter may result in deterioration of the digital DMX signal. The maximum recommended cable-run distance is 500 meters (1640 ft). The maximum recommended number of fixtures on a serial data link is 32 fixtures.

#### Data/DMX Cabling

To link fixtures together you'll need data cables. You should use data-grade cables that can carry a high quality signal and are less prone to electromagnetic interference.

For instance, Belden© 9841 meets the specifications for EIA RS-485 applications. Standard microphone cables will "probably" be OK, but note that they cannot transmit DMX data as reliably over long distances. In any event, the cable should have the following characteristics:

*2-conductor twisted pair plus a shield  
Maximum capacitance between conductors – 30 pF/ft.  
Maximum capacitance between conductor & shield – 55 pF/ft.  
Maximum resistance of 20 ohms / 1000 ft.  
Nominal impedance 100 – 140 ohms*

#### Setting the DMX Input Connector as the Active DMX Input

Navigate the main menu to reach **SET**, press **<ENTER>**, then use the **<UP/DOWN>** buttons until **SIGN** is displayed, then press **<ENTER>** again. Now use the **<UP/DOWN>** buttons to highlight **CABL** (cable mode), and press **<ENTER>** to confirm.

## Cable Connectors

Cables must have a male XLR connector on one end and a female XLR connector on the other end. (Duh!)

**A Word on Termination:** DMX is a resilient communication protocol, however errors still occasionally occur. Termination reduces signal errors, and therefore best practices include use of a terminator in all circumstances. If you are experiencing problems with erratic fixture behavior, especially over long signal cable runs, a terminator may help improve performance.

**To build your own DMX Terminator:**  
Obtain a 120-ohm, 1/4-watt resistor, and wire it between pins 2 & 3 of the last fixture. They are also readily available from specialty retailers.

**CAUTION:** Do not allow contact between the common and the fixture's chassis ground. Grounding the common can cause a ground loop, and your fixture may perform erratically. Test cables with an ohm meter to verify correct polarity and to make sure the pins are not grounded or shorted to the shield or each other.

### 3-Pin??? 5-Pin??? Huh?!?

If you use a controller with a 5-pin DMX output connector, it's no problem! you can simply use the installed 5-pin DMX input and/or output connections found on the back of your fixture(s).

Conductor	3-Pin Female (Output)	5-Pin Male (Input)
Ground/Shield	Pin 1	Pin 1
Data 1- (Primary Data Link)	Pin 2	Pin 2
Data 1+ (Primary Data Link)	Pin 3	Pin 3
Data 2- (Optional Secondary Data Link)	Pin 4	Pin 4
Data 2+ (Optional Secondary Data Link)	Pin 5	Pin 5

## Take It To The Next Level: Setting Up DMX Control

**Step 1:** Connect the male connector of the DMX cable to the female connector (output) on the controller.

**Step 2:** Connect the female connector of the DMX cable to the first fixture's male connector (input). *Note:* It doesn't matter which fixture address is the first one connected. We recommend connecting the fixtures in terms of their proximity to the controller, rather than connecting the lowest fixture number first, and so on.

**Step 3:** Connect other fixtures in the chain from output to input as above. Place a DMX terminator on the output of the final fixture to ensure best communication.

## Fixture Linking (Master/Slave Mode)

1. Connect the (male) 3/5-pin connector side of the DMX cable to the output (female) 3/5-pin connector of the first fixture.
2. Connect the end of the cable coming from the first fixture which will have a (female) 3/5-pin connector to the input connector of the next fixture consisting of a (male) 3/5-pin connector. Then, proceed to connect from the output as stated above to the input of the following fixture and so on.

**A quick note:** Often, the setup for Master-Slave and Standalone operation requires that the first fixture in the chain be initialized for this purpose via either settings in the control panel or DIP-switches. Secondly, the fixtures that follow may also require a slave setting.

Check the **“Operating Adjustments”** section in this manual for complete instructions for this type of setup and configuration.

## Mounting & Rigging

This fixture may be mounted in any SAFE position provided there is enough room for ventilation.

It is important never to obstruct the fan or vents pathway. Mount the fixture using a suitable “C” or “O” type clamp. The clamp should be rated to hold at least 10x the fixture’s weight to ensure structural stability. Do not mount to surfaces with unknown strength, and ensure properly “rated” rigging is used when mounting fixtures overhead.

Adjust the angle of the fixture by loosening both knobs and tilting the fixture. After finding the desired position, retighten both knobs.

- When selecting installation location, take into consideration lamp replacement access (if applicable) and routine maintenance.
- Safety cables MUST ALWAYS be used.
- Never mount in places where the fixture will be exposed to rain, high humidity, extreme temperature changes or restricted ventilation.

## Using the AnyFi™ Wireless DMX Receiver

In addition to the unbridled thrill you already received the first time you turned on your fixture, you'll be delighted to know that your fixture is equipped to work seamlessly with our own Skywire™ 2.4GHz wireless DMX products, as well as W-DMX™ wireless products.

Skywire™ AnyFi™ wireless DMX products feature 512 auto-assigning frequencies in either 6 or 7 groups allowing multiple systems to run simultaneously in the same space, completely free of interference, with reliable wireless communication for over 1000 feet line-of-sight! Using the W-DMX™ wireless protocol in AnyFi™, you can expect the same outstanding wireless range, very easy setup, and leave any worries behind concerning loss of signal due to its built-in FHSS technology (Frequency Hopping Spread Spectrum).

So first, if you would like to use Skywire™ wireless DMX protocol, you will need a wiCICLE® transmitter, Lightcaster™ transceiver, or any Blizzard Lighting controller with this type of built-in wireless transmitter. And if you plan on using W-DMX™ 2.4GHz wireless protocol, you will need a W-DMX™ transceiver to broadcast the signal from your controller, such as our Lightcaster W-DMX™.

### Ready to move on? Well alrighty!

**IMPORTANT** - *If you are using Blizzard's Lightcaster Any-Fi wireless transmitter in W-DMX compatibility mode along with DMX control software like our Eclipse DMX or Lucid products, you must set the MAB (Mark After Break) in the software to 30 microseconds (µS) to avoid potential signal timing issues.*

#### 1.) Set the Fixture to Receive Wireless Signal in the Control Panel

a.) Navigate the main menu to reach **SET**, press **<ENTER>**, then use the **<UP/DOWN>** buttons until **SIGN** is displayed, then press **<ENTER>** again. Now use the **<UP/DOWN>** buttons to highlight **2.4G** (wireless mode), and press **<ENTER>**.

#### 2.) Resetting The Wireless

a.) Navigate the main menu to reach **SET**, press **<ENTER>**, then use the **<UP/DOWN>** buttons until **WIRE** is displayed, then press **<ENTER>** again.  
b.) From here, you can use the **<UP/DOWN>** buttons to highlight **REST** and press **<ENTER>**, select **YES**, then **<ENTER>** to reset the wireless setup.

#### 3.) Select W-DMX™ or Skywire™ Modes

a.) Make sure the device you are using to transmit signal with is powered on.  
b.) Navigate the main menu to reach **SET**, press **<ENTER>**, then use the **<UP/DOWN>** buttons until **WIRE** is displayed, then press **<ENTER>** again.  
c.) Now use the **<UP/DOWN>** buttons to highlight **KEY**, and press **<ENTER>**.  
d.) At this point, please note that every time you touch the **<ENTER>** button, the wireless LED status indicator changes between 4 colors (**currently 3 are functional**):

- **GREEN:** W-DMX™ 2.4 GHz Receiver Mode
- **YELLOW:** Skywire™ 7CH Receiver Mode (wiCICLE™ & LightCaster Compatible)
- **RED:** Skywire™ 6CH Receiver Mode (AnyFi™ Transmitter Compatible)

*\*Note: The top level **BLUE** channel mode currently has no function.*

e.) While the LED indicator is illuminated in **GREEN** (for W-DMX), **YELLOW** (for Skywire 7CH), or **RED** (for Skywire 6CH) press and hold the **<ENTER>** button for **1 second** to confirm and save. Press and hold **<ENTER>** for **3 seconds** to disconnect.

*For W-DMX™ connections, you should be done. The fixture will detect the signal!*

**\*For Skywire™ wireless connections, continue to Step 5 on the next page.**

#### 4.) Successful W-DMX™ Connections

The LED status indicator will blink, then turn white if searching for a signal. When a signal connection is established, the LED on the fixture will be solid **GREEN**, if signal is lost the LED will flash **RED**.

##### **W-DMX™ Setup Examples:**

- 1.) One transceiver with multiple receiver setups:
  - a.) Power on all units.
  - b.) On the receiving W-DMX fixtures, follow the previous instructions to pair them with the transmitting unit.
  
- 2.) Multiple transceiver setups, with multiple receivers; e.g. 3 groups consisting of a transceiver & receiver(s) named A, B, and C:
  - a.) Turn power off of all units.
  - b.) Group "A" gets powered on, then follow step 1 above.
  - c.) Group "B" gets powered on, then follow step 1 above.
  - d.) Group "C" gets powered on, then follow step 1 above.

#### 5.) Skywire™ 6/7-Channel Modes: Selecting the Channel Group

1. After selecting either Skywire 2.4GHz Mode in **Step 3** on the previous page, the fixture is ready and waiting for your input to select the frequency group to match that of your transmitting source.

- a.) Tap the **<ENTER>** button repeatedly to scroll through the channel groups:

Top Menu LED Color	Mode	Channel LED Color	Information
	Skywire™ 6CH (AnyFi™ products only)		CH1
			CH2
			CH3
			CH4
			CH5
			CH6
	W-DMX Receive (G3 or G4)		
	Skywire™ 7CH (wiCICLE™ compatible)		CH1
			CH2
			CH3
			CH4
			CH5
			CH6
			CH7

- b.) While your chosen group number/color is illuminated on the status LED, press and hold the **<ENTER>** button for 3 seconds.

2. The LED on the transmitter will blink **RED** slowly until communication is established with the receiver. The status LED on the receiving fixtures will be illuminated in the color of the group that it is set on until communication is established.

3. Once the clearest channel is auto-selected, the status LEDs will blink quickly on both the transmitter and receiver. NOTE: The color of the status LED DURING operation does not indicate channel group, instead it indicates whether the unit is transmitting or receiving.  
**That's It!**

# 4. OPERATING ADJUSTMENTS

## The Control Panel

All the goodies and different modes possible with the Colorise™Quadra are accessed by using the control panel on the rear of the fixture. There are 4 control buttons below the LED display which allow you to navigate through the various control panel menus.

### <MENU>

Is used to navigate to the previous higher-level menu item.

### <UP>

Scrolls through menu items and numbers in ascending order.

### <DOWN>

Scrolls through menu items and numbers in descending order.

### <ENTER>

Is used to select and confirm/store the current selection.

The control panel LED display shows the menu items you select from the menu map on page #13. When a menu function is selected, the display will show immediately the first available option for the selected menu function. To select a menu item, press **<ENTER>**.

Use the **<UP>** and **<DOWN>** buttons to navigate the menu options. Press the **<ENTER>** button to select the menu function currently displayed, or to enable a menu option. To return to the previous option or menu without changing the value, press the **<MENU>** button.

## Control Panel Menu Structure

<b>ADDR</b>	001-512		To choose the DMX address	
<b>STAT</b>	A		Amber intensity (0% <--> 100%)	
	W		Warm White intensity (0% <--> 100%)	
	C		Cool white intensity (0% <--> 100%)	
	SHUT		Flash / strobe speed (0-255)	
<b>SET</b>	CHMD	7CH	To run in 7-channel mode	
		4CH	To run in 4-channel mode	
		3CH	To run in 3-channel mode	
	DIM (dimming)	LIN	Linear dimming curve	
		SQR	Square law curve	
		ISQR	Inverse square law curve	
		SCUR	S-curve	
		LIN.	Linear dimming curve (smooth)	
		SQR.	Square law curve (smooth)	
		ISQR.	Inverse square law curve (smooth)	
	DISY	ON	LED menu display is on continually	
		2MIN	LED menu display shuts off after 2 minutes of inactivity	
	LOCK	YES/NO	Menu locks after 2min. To unlock, press the buttons in this order: <b>&lt;MENU&gt;</b> , <b>&lt;UP&gt;</b> , <b>&lt;DOWN&gt;</b> , <b>&lt;ENTER&gt;</b> 3 times in a row, and with no longer than 2 seconds between each button press.	
	SIGN	<b>&lt;ENTER&gt;</b>	Choose the signal type: 2.4G (wireless) or CABL (cable)	
WIRE	<b>&lt;ENTER&gt;</b>	Wireless Reset: REST, or KEY desired wireless mode (color coded LED)		
<b>CTST</b>	CT01-CT10	<b>&lt;ENTER&gt;</b>	A/W/C adjustments for custom color banks 01-10	
	CHS1	<b>&lt;ENTER&gt;</b>	Custom program 1	
	CHS2	<b>&lt;ENTER&gt;</b>	Custom program 2	
	CHS3	<b>&lt;ENTER&gt;</b>	Custom program 3	
	SOU1	<b>&lt;ENTER&gt;</b>	Sound Active Mode 1 (color changing)	
	SOU2	<b>&lt;ENTER&gt;</b>	Sound Active Mode 2 (white strobe)	
<b>PROG</b>	CHS1-CHS3 Custom programs 1-3.	SC01-SC20 20 scenes for each custom program.	A (0-255)	SHUT (strobe, 0-255)
			W (0-255)	TIME (duration, 0-255)
			C (0-255)	WAIT (before fade, 0-255)
				USE (use scene, YES/NO)
<b>INFO</b>	SOFT	Vx.x	Software version information	
		POW	Current automated overheat protection level (100%/80%/50%)	
<b>LOAD</b>	ST L	Restore factory settings		
	PR L	Restore factory program settings		
<b>SEND</b>	YES/NO	Sync settings between fixtures via DMX		

## DMX Mode

Allows the unit to be controlled by any universal DMX controller.

### Setting the DMX Address:

1.) The default mode for the fixture is DMX, which appears as **001** on the LED readout. To select a different DMX address, using the **<MENU>** button, select **ADDR**, then hit **<ENTER>**. Use the **<UP/DOWN>** buttons to select the correct address, then hit **<ENTER>** to confirm.

### Setting the DMX Channel Mode:

1.) To select a DMX channel mode, press the **<MENU>** button, then use the **<UP/DOWN>** buttons until the display reads **SET** and press the **<ENTER>** button. Then use the **<UP/DOWN>** buttons until the display reaches **CHMD**, and press **<ENTER>**. Now press the **<UP/DOWN>** buttons again to highlight your desired DMX channel mode, and press the **<ENTER>** button to confirm.

### Slave Mode:

- 1.) Daisy chain the fixtures DMX in/out, having the controller at the beginning of the line.
- 2.) There is nothing else to it! The first fixture in the DMX chain is the master fixture, and the following fixtures will follow the master.

## Dimming Mode Settings:

Allows users to set the fixture to use 1 of 4 (x2) dimming curve settings for smoother (and slower) dimming capabilities. In the control panel menu, there are two settings for each curve that are distinguishable from one another by the trailing dot.

\*The curve settings with the trailing dot adds a bit more delay to the curve for a smoother effect.

- 1.) Use the **<MENU>** and **<UP/DOWN>** buttons to navigate to **SET** and press **<ENTER>**, then **<UP/DOWN>** buttons again to scroll to **DIM**, and press the **<ENTER>** button.
- 2.) Now use the **<UP/DOWN>** buttons to highlight either **LIN** (Linear), **SQR** (Square), **ISQR** (Inverse Square), **SCUR** (S-Curve), **LIN.** (Smooth Linear), **SQR.** (Smooth Square), **ISQR.** (Smooth Inverse Square), or **SCUR.** (Smooth S-Curve), then hit **<ENTER>**.

## LED Display On/Off and Menu Lock:

- 1.) Use the **<MENU>** and **<UP/DOWN>** buttons to navigate to **SET** and press **<ENTER>**, then navigate to **DISY** (Display On/Off), or **LOCK** (Menu Lock) and press **<ENTER>**.
- 2.) In **DISY**, you can set the LED menu display to be continually on, or shut off after 2 minutes of inactivity. In **LOCK**, select **YES** or **NO**, and press **<ENTER>**. Enabling menu lock will disable the buttons after 2 minutes of inactivity. To exit this locked setting, press: **<MENU>**, **<UP>**, **<DOWN>**, **<ENTER>** 3 times in a row, and with no longer than 2s between each press.

## Custom Programs:

Allows users to create up to 3 customizable, 20 scene programs that are directly accessible via the control panel and also in DMX mode.

### Creating A Custom Program:

- 1.) Use the **<MENU>** and **<UP/DOWN>** buttons to navigate to **PROG**, and press **<ENTER>**.
- 2.) Now use the **<UP/DOWN>** buttons to highlight your choice of either **CHS1**, **CHS2**, or **CHS3** and press **<ENTER>**.
- 3.) Start with editing scene 1 (**SC01**), customizing it to your liking by using the choices outlined in the table below. You can mix any color, and set the duration (in seconds) before moving on to the next scene (**TIME 0-255**). You can also add a fade in effect to the start of this scene (**WAIT 0-255**), and/or strobe (**SHUT 0-255**). Finally, if you want to use this scene in your program, *be sure to enable it (USE: YES/NO)*.
- 4.) Repeat the above process to create up to 20 scenes in each of the 3 customizable programs.

A (0-255) - Amber Intensity	SHUT (0-255) - Strobe (slow - fast)	USE (YES/NO) Use Scene in Program?
W (0-255) - Warm White Intensity	TIME (0-255) - Scene Time (seconds)	<b><i>IMPORTANT:</i></b> <b><i>If USE is set to NO, or TIME is set to 0, the scene will not run!</i></b>
C (0-255) - Cool White Intensity	WAIT (0-255) - Fade In (fast - slow)	

### Running A Custom Program:

- 1.) To view your newly created lighting masterpiece, use the **<MENU>** and **<UP/DOWN>** buttons to navigate to **AUTO**, and press **<ENTER>**.
- 2.) Use the **<UP/DOWN>** buttons to highlight your choice of either **CHS1**, **CHS2**, or **CHS3** and press **<ENTER>**. These are also directly accessible from the **Effect Channel** in DMX mode.

## Auto and Sound Active Modes:

Set single or Master/Slaved units to run in sound active or auto mode at user selectable speeds.

### Auto Mode:

- 1.) Use the **<MENU>** and **<UP/DOWN>** buttons to navigate to navigate to **AUTO**, and press the **<ENTER>** button.
- 2.) Now use the **<UP/DOWN>** buttons to highlight any program ranging from **CHS1-CHS3**, and press **<ENTER>**.

### Sound Active Mode:

- 1.) Use the **<MENU>** and **<UP/DOWN>** buttons to navigate to **AUTO** and press **<ENTER>**, then with the **<UP/DOWN>** buttons navigate to **SOU1** (color change), or **SOU2** (white strobe only), and press the **<ENTER>** button.

## Custom Static Colors & Preset Colors:

*Allows the user to create and save custom static colors for use in standalone or DMX mode.*

### *Static Color Mixing and Preset Mixed Colors*

**Important:** *When finished editing and saving a static color, you must return to (and stay on) any one of the editing screens (0-255) to make the effect stay on continually. If you were only to press <ENTER> to save your final edit, you would again be on the static color/effect selection menu, which from here will result in blackout mode after 1 minute.*

1.) Use the <MENU> and <UP/DOWN> buttons to navigate to **STAT** and press <ENTER>, then <UP/DOWN> buttons to select A/W/C and push <ENTER> to confirm your selection. You can also select **SHUT** to add s strobe effect. Adjust the values (0-255) to your liking and press <ENTER> to save.

### *Mix and Save Custom Colors (1-10)*

- 1.) Use the <MENU> and <UP/DOWN> buttons to navigate to **CTST** and press <ENTER>, then <UP/DOWN> buttons to select a color bank from **CT01-CT10**, and push <ENTER> to confirm your selection.
- 2.) Now use the <UP/DOWN> buttons to highlight either **A** (Amber Level), **W** (Warm White Level), or **C** (Cool White Level), then hit <ENTER>.
- 3.) Finally, using the <UP/DOWN> buttons, select the maximum level for each color between 000-255 (000=off), and hit <ENTER> to confirm your choice(s).
- 4.) These 10 custom colors can be accessed and edited to your liking at any time, and will be saved even after powering off the fixture.
- 5.) Your custom static colors are directly accessible from the **Effect Channel** in DMX mode.

## Fixture Reset Functions:

*Allows users to reset the fixture to factory default settings, without losing customized settings, or reset the custom programs exclusively.*

- 1.) Use the <MENU> and <UP/DOWN> buttons to navigate to **LOAD** and press <ENTER>, then use the <UP/DOWN> buttons to highlight **ST L** or **PR L**, and press <ENTER>.
- 2.) Use the <UP/DOWN> buttons to highlight either **YES** or **NO**, then press <ENTER>.
- 3.) The **ST L** reset function will reset all default values *with the exception* of those in **ADDR** (address), **CTST** (10 custom colors), and **PROG** (custom scenes and programs).
- 4.) The **PR L** reset function will only reset all customized program settings found in the **PROG** settings (custom scenes and programs).

## Data Sync Feature:

*Users can transfer their custom settings from one fixture to another via DMX.*

- 1.) Disconnect fixtures from any DMX controllers, and link them together via DMX in/out.
- 2.) On the sending fixture (DMX out), navigate the main menu using the <UP/DOWN> buttons to reach **SEND**, and press the <ENTER> button.
- 3.) Select **YES**, and press the <ENTER> button to begin the transfer.
- 4.) Information for **ADDR** (address) will not be sent.
- 5.) After the data has been transferred, the receiving fixture will be automatically be reset.

## DMX Value In-Depth Reference Guide

Function	Value	What It Does
<b>Dimmer</b>	000 <--> 255	(0% <--> 100%)
<b>Amber Intensity</b>	000 <--> 255	(0% <--> 100%)
<b>Warm White Intensity</b>	000 <--> 255	(0% <--> 100%)
<b>Cool White Intensity</b>	000 <--> 255	(0% <--> 100%)
<b>Strobe</b>	000 <--> 005 006 <--> 020 021 <--> 060 061 <--> 100 101 <--> 140 141 <--> 180 181 <--> 220 221 <--> 255	No strobe Non-synchronous strobe (slow <--> fast) Synchronous strobe (slow <--> fast) Electronic sine wave (slow <--> fast) Random strobe (slow <--> fast) Opening pulse (slow <--> fast) Closing pulse (slow <--> fast) Electronic square wave (slow <--> fast)
<b>Effect</b>	000 <--> 010 011 <--> 015 016 <--> 020 021 <--> 025 026 <--> 030 031 <--> 035 036 <--> 040 041 <--> 045 046 <--> 050 051 <--> 055 056 <--> 060 061 <--> 085 086 <--> 090 091 <--> 095 096 <--> 100 101 <--> 105 106 <--> 110 111 <--> 255	No Function Custom color 1 (CT01 in menu settings) Custom color 2 (CT02 in menu settings) Custom color 3 (CT03 in menu settings) Custom color 4 (CT04 in menu settings) Custom color 5 (CT05 in menu settings) Custom color 6 (CT06 in menu settings) Custom color 7 (CT07 in menu settings) Custom color 8 (CT08 in menu settings) Custom color 9 (CT09 in menu settings) Custom color 10 (CT10 in menu settings) Reserved Custom program 1 (CH01 in menu settings) Custom program 2 (CH02 in menu settings) Custom program 3 (CH03 in menu settings) Sound active mode 1 (color change) Sound active mode 2 (white strobe) Reserved
<b>Dimming Mode</b>	000 <--> 010 011 <--> 020 021 <--> 030 031 <--> 040 041 <--> 050 051 <--> 060 061 <--> 070 071 <--> 080 081 <--> 090 091 <--> 255	Default (as set in the LED menu) Linear curve Square law curve Inverse square law curve S-curve Linear curve (smooth) Square law curve (smooth) Inverse square law curve (smooth) S-curve (smooth) Default (as set in the LED menu)

## DMX In-Depth Reference: 7-Channel Modes

10-Channel	Name
1	Dimmer (0%<--> 100%)
2	Amber Intensity (0%<--> 100%)
3	Warm White Intensity (0%<--> 100%)
4	Cool White Intensity (0%<--> 100%)
5	Strobe
6	Effect
7	32-Bit Dimming Mode

## DMX In-Depth Reference: 4-Channel Modes

4-Channel	Name
1	Dimmer (0%<--> 100%)
2	Amber Intensity (0%<--> 100%)
3	Warm White Intensity (0%<--> 100%)
4	Cool White Intensity (0%<--> 100%)

## DMX In-Depth Reference: 3-Channel Modes

3-Channel	Name
1	Amber Intensity (0%<--> 100%)
2	Warm White Intensity (0%<--> 100%)
3	Cool White Intensity (0%<--> 100%)

# 5. APPENDIX

## A Quick Lesson On DMX

DMX (aka DMX-512) was created in 1986 by the United States Institute for Theatre Technology (USITT) as a standardized method for connecting lighting consoles to lighting dimmer modules. It was revised in 1990 and again in 2000 to allow more flexibility. The Entertainment Services and Technology Association (ESTA) has since assumed control over the DMX512 standard. It has also been approved and recognized for ANSI standard classification.

DMX covers (and is an abbreviation for) Digital MultipleXed signals. It is the most common communications standard used by lighting and related stage equipment.

DMX provides up to 512 control "channels" per data link. Each of these channels was originally intended to control lamp dimmer levels. You can think of it as 512 faders on a lighting console, connected to 512 light bulbs. Each slider's position is sent over the data link as an 8-bit number having a value between 0 and 255. The value 0 corresponds to the light bulb being completely off while 255 corresponds to the light bulb being fully on.

DMX data is transmitted at 250,000 bits per second using the RS-485 transmission standard over two wires. As with microphone cables, a grounded cable shield is used to prevent interference with other signals.

There are five pins on a DMX connector: a wire for ground (cable shield), two wires for "Primary" communication which goes from a DMX source to a DMX receiver, and two wires for a "Secondary" communication which goes from a DMX receiver back to a DMX source. Generally, the "Secondary" channel is not used so data flows only from sources to receivers. Hence, most of us are most familiar with DMX-512 as being employer over typical 3-pin "mic cables," although this does not conform to the defined standard.

DMX is connected using a daisy-chain configuration where the source connects to the input of the first device, the output of the first device connects to the input of the next device, and so on. The standard allows for up to 32 devices on a single DMX link.

## Troubleshooting

Symptom	Solution
Fixture Auto-Shut Off	Check the fan in the fixture. If it is stopped or moving slower than normal, the unit may have shut itself off due to high heat. This is to protect the fixture from overheating. Clear the fan of obstructions, or return the unit for service.
No Light Output	Check to ensure fixture is operating under correct mode, IE sound active/auto/DMX/Etc., if applicable.
Chase Speed Too Fast/Slow	Check to ensure proper setup of speed adjustment.
No Power	Check fuse, AC cord and circuit for malfunction.
Blown Fuse	Check AC cord and circuit for damage, verify that moving parts are not restricted and that unit's ventilation is not obstructed
No Response to Audio	Verify that the fixture is in "Sound Active" mode. Adjust Audio Sensitivity, If Applicable.
Fixture Not Responding / Responding Erratically	Make sure all connectors are seated properly and securely. Use Only DMX Cables and/or check cables for defects Install a Terminator. Reset fixture(s).

## Keeping Your Colorise™ Infiniwhite As Good As New

The fixture you've received is a rugged, tough piece of pro lighting equipment, and as long as you take care of it, it will take care of you. That said, like anything, you'll need to take care of it if you want it to operate as designed. You should absolutely keep the fixture clean, especially if you are using it in an environment with a lot of dust, fog, haze, wild animals, wild teenagers or spilled drinks.

Cleaning the optics routinely with a suitable glass cleaner will greatly improve the quality of light output. Keeping the fans free of dust and debris will keep the fixture running cool and prevent damage from overheating.

In transit, keep the fixtures in cases. You wouldn't throw a prized guitar, drumset, or other piece of expensive gear into a gear trailer without a case, and similarly, you shouldn't even think about doing it with your shiny new light fixtures.

Common sense and taking care of your fixtures will be the single biggest thing you can do to keep them running at peak performance and let you worry about designing a great light show, putting on a great concert, or maximizing your client's satisfaction and "wow factor." That's what it's all about, after all!

### Returns (Gasp!)

We've taken a lot of precautions to make sure you never even have to worry about sending a defective unit back, or sending a unit in for service. But, like any complex piece of equipment designed and built by humans, once in a while, something doesn't go as planned. If you find yourself with a fixture that isn't behaving like a good little fixture should, you'll need to obtain a Return Authorization (RA).

Don't worry, this is easy. Just send an email to [support@blizzardlighting.com](mailto:support@blizzardlighting.com), and we'll issue you an RA. Then, you'll need to send the unit to us using a trackable, pre-paid freight method. We suggest using USPS Priority or UPS. Make sure you carefully pack the fixture for transit, and whenever possible, use the original box & packing for shipping.

When returning your fixture for service, be sure to include the following:

- 1.) Your contact information (Name, Address, Phone Number, Email address).
- 2.) The RA# issued to you
- 3.) A brief description of the problem/symptoms.

We will, at our discretion, repair or replace the fixture. Please remember that any shipping damage which occurs in transit to us is the customer's responsibility, so pack it well!

### Shipping Issues

**Damage incurred in shipping is the responsibility of the shipper, and must be reported to the carrier immediately upon receipt of the items. Claims must be made within seven (7) days of receipt.**

## Tech Specs!

<b>Weight &amp; Dimensions</b>	
Width	10.7 inches (272.1 mm)
Depth	5.6 inches (141.4 mm)
Height	12.1 inches (307.9 mm)
Weight	11.5 lbs. (5.2 kg)
<b>Power</b>	
Operating Voltage	100-264VAC, 47-63 Hertz
Power Consumption	100W
<b>Light Source</b>	
LED	18x 5W 3-in-1 ACW LEDs, 100,000 hours
<b>Optical</b>	
Beam Angle	25 degree optics standard
Luminous Intensity	TBA
<b>AnyFi™ Wireless Receiver</b>	
W-DMX™ Receiver	Frequency Hopping W-DMX™ Protocol
Skywire™ Receiver	2.4GHz ISM (2.402-2.48GHz), 512ch, 6/7 frequency groups
Latency	Less Than 5ms
Receiver Sensitivity	-94dBm
<b>Thermal</b>	
Max. Operating Temp.	104 degrees F (40 degrees C) ambient
<b>Control</b>	
Protocol	USITT DMX-512
DMX Channels	3/4 or 7-channels
Input	3/5-pin XLR Male
Output	3/5-pin XLR Female
Other Operating Modes	Standalone, Master/Slave, Sound Active, Color Preset
<b>Other Information</b>	
Another day, another six pointless words.	
<b>Warranty</b>	2-year limited warranty, does not cover malfunction caused by damage to LEDs.

**DISCLAIMER:**

The power connector fitted to the fixture and fixture cord are designed for compatibility with products manufactured by Neutrik AG, Neutrik USA and their related entities, however they are not manufactured by, affiliated with or endorsed by Neutrik AG, Neutrik USA, or any related entity. Neutrik® and power-CON® are registered trademarks of Neutrik AG.
