

INTRODUCTION

Congratulations on your selection of an RDL HD-Series Ultra-High-Efficiency commercial mixer amplifier. The HD-MA35UA is part of the world's first full-featured environmentally conscious "green" mixer amplifier series for commercial installations. This product includes studio quality microphone input stages, line-level transformer isolation, equalization, remote control capability and integral analog compression coupled to sonically pleasing analog-filtered high efficiency Class D output stages. An internal low-power-consumption processor monitors usage demands to completely shut down internal circuitry for maximum power conservation and extremely low long-term operating cost. The HD-Series mixer amplifiers are designed and manufactured in the U.S.A. using the most advanced automated manufacturing and testing processes for years of reliable high performance and cost savings.

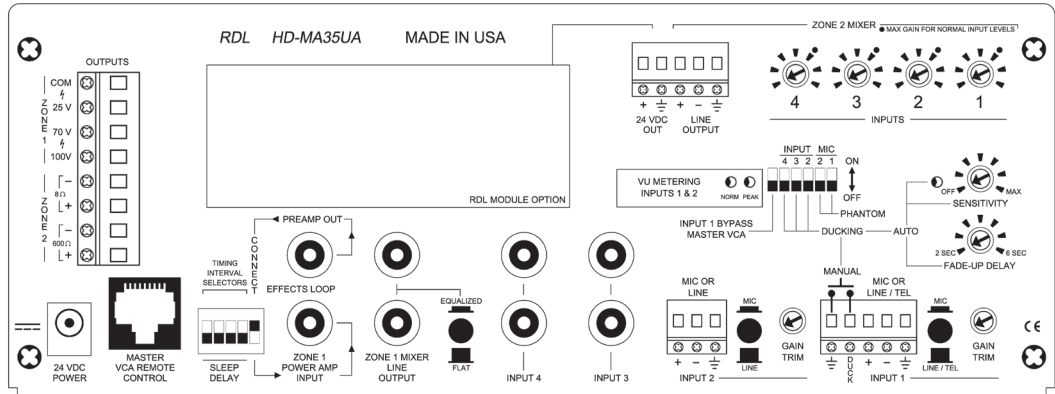

CONNECTIONS

HD-MA35UA 25/70/100 V

USE ONLY THE POWER SUPPLY SUPPLIED WITH THE MODULE.

USE ONLY THE TERMINAL BLOCK SUPPLIED WITH THE MODULE.

OUTPUT CONNECTIONS MUST BE MADE BY PERSONS ADVISED OR SUPERVISED TO AVOID DANGERS AND PREVENT RISKS WHICH ELECTRICITY MAY CREATE.

Connections are made on the rear panel. All connections are on detachable terminal blocks or connectors. The Zone 2 mixer, Inputs 1 and 2 gain trimmers and VU-meter, ducking controls and assignments, phantom voltage selectors and sleep mode delay timer settings are also provided on the rear panel. The Zone 1 mixer, tone controls, indicators and power button are on the front panel.

INPUT WIRING

Balanced MIC or LINE source connected using a single-pair shielded audio cable

Balanced LINE signal from phone PBX or audio transformer

Unbalanced MIC or LINE source connected using a single-conductor shielded audio cable

Four inputs may be connected. Each input is available on the primary Zone 1 front-panel mixer and on the Zone 2 rear-panel mixer. If used, the paging source is usually connected to Input 1.

INPUT 1

INPUT 1 BYPASS MASTER VCA

If the INPUT 1 (paging) level is to be controlled by a master VCA remote control, set the switch OFF (down). If a remote control is *not* intended to adjust INPUT 1, set the switch ON (up). In BYPASS, pages are heard even if the master is off.

PHANTOM VOLTAGE

If a condenser mic may be connected to INPUT 1, set the phantom voltage ON (switch up).

GAIN TRIM

Feed a normal signal level into INPUT 1 and adjust the GAIN TRIM for maximum brightness of the NORM green LED with occasional flashing of the red PEAK LED. (Disconnect INPUT 2 during this adjustment.)

MIC or LINE Gain

Set the Input Gain to MIC or LINE/TEL according to the input signal connected.

INPUT 1

Connect a MIC or LINE source. This is normally a paging mic or the line-level paging output from a phone PBX. The line-level input is transformer balanced (providing galvanic isolation) and may be connected balanced or unbalanced.

The front-end preamplifier stages for Inputs 1 and 2 are each equipped with a gain trimmer. The dual-LED VU meter displays the signal level for Inputs 1 and 2 following the preamplifiers. This allows each input gain trimmer to be set properly for the optimum signal-to-noise ratio, avoiding the possibility of input clipping common to mixers with unmetred input stages.

PRIORITY PAGING

INPUT DUCKING SELECTOR

Select any or all inputs (2, 3 and/or 4) to be ducked when a paging priority is detected (VOX activated by audio signal on INPUT 1, or MANUAL activation by an external switch). Selected inputs are ducked only in Zone 1 (the primary amplified output). Set the switch ON (switch up) to duck the input in Zone 1; set the switch OFF to prevent ducking. Inputs are not ducked in Zone 2.

VOX (VOICE-ACTIVATED PRIORITY)

If a paging signal is to automatically "duck" (fade down) other audio inputs, feed a normal paging signal into INPUT 1 and adjust the SENSITIVITY trimmer until the LED flashes regularly. Set the SENSITIVITY trimmer fully CCW to disable the VOX function.

FADE-UP DELAY

Adjust the FADE-UP DELAY trimmer to delay the start of the audio fade-up following the release of an external manual priority switch and/or VOX priority detection.

MANUAL PRIORITY

If a switch (such as a paging mic push-to-talk switch) should "duck" (fade down) other audio inputs, connect the switch to the DUCK and Ground terminals.

INPUT 2

PHANTOM VOLTAGE

If a condenser mic may be connected to INPUT 2, set the phantom voltage ON (switch up).

GAIN TRIM

Feed a normal signal level into INPUT 2 and adjust the GAIN TRIM for maximum brightness of the NORM green LED with occasional flashing of the red PEAK LED. (Disconnect INPUT 1 during this adjustment.)

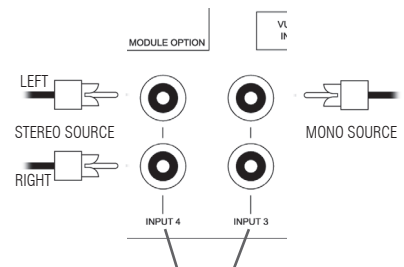

MIC or LINE Gain

Set the Input Gain to MIC or LINE according to the input signal connected.

INPUT 2

Connect a MIC or LINE source. The line-level input is active balanced and may be connected balanced or unbalanced.

INPUTS 3 & 4

INPUTS 3 & 4

Connect a mono or stereo standard unbalanced -10 dBV audio source to INPUTS 3 and/or 4. The two input jacks associated with each input provide active summing of the left and right channels, thereby preserving the stereo separation of the audio source.

REMOTE CONTROL FOR ZONE 1 AMPLIFIER OUTPUT

MASTER VCA REMOTE CTRL
Connect this RJ45 jack directly to an RDL remote control. (Examples: RLC10KM or RLC10KMS) The RJ45 wiring may be "broken out" for connection to external OEM 0 to 10 Vdc control, RDL remote controls (see RLC10K) or 10k Ohm pot.

RJ45 Control Wiring

- PIN 1, VCA control
- PIN 2
- PIN 3
- PIN 4
- PIN 5
- PIN 6
- PIN 7, +10 Vdc
- PIN 8, Ground Ref.

External 0 to 10 V Control

- Pin 1 0 to 10 V
- Pin 8 Ground Reference

External 10k Ohm Pot.

- CW → PIN 7, +10 Vdc
- ← PIN 1, VCA control
- CCW → PIN 8, Ground Ref.

WIRING "Break-out"

EFFECTS LOOP

EFFECTS LOOP CONNECT SWITCH
This switch is normally left in the ON (up) position when the effects loop is not used. The switch connects the preamp output from the Zone 1 mixer directly to the input of the Zone power amp stage. Set this switch OFF (down) to insert external processing.

MODULE POWER
24 Vdc, 100 mA is available to power external modules.

MODULE MOUNTING AREA
This area is reserved for mounting RDL STICK-ON or TX-Series modules. This example shows a high-pass filter to protect horn loudspeakers from bass overload. Other effects possibilities include equalizers, mixers, crossovers or processors.

ZONE 1 OUTPUT CONNECTIONS

Multiple 25 V speakers

Multiple 70 V speakers

Multiple 100 V speakers

Unplug the power supply and remove the output terminal security cover. Connect constant voltage speakers to a single output voltage tap. Do not connect speakers with dissimilar voltages to multiple output taps. Total connected load must not exceed 35 W. Upon completion of the output terminal block wiring, re-install the cover over the terminal block prior to plugging in the power supply.

ZONE 2

LINE OUTPUT
Active balanced

INPUTS
Adjust for desired output level

Connect an 8 Ohm speaker or multiple speakers configured to present an 8 Ohm load to the amplifier.

The Zone 2 mixer operates from the same 4 inputs as the front-panel Zone 1 mixer. Ducking assignments do not affect the signals in Zone 2. Each input source should be adjusted to the desired output level. Turn down unused inputs to remove them from the mix. Three Zone 2 outputs are provided. The LINE OUTPUT is balanced and may be used to feed the input of another power amplifier. The 600 Ohm output is transformer isolated (providing galvanic isolation) to drive a phone PBX paging input. The 8 Ohm output drives an 8 Ohm speaker with up to 4 W RMS.

AUTOMATIC SLEEP MODE

10 Minutes, 20 Minutes, 30 Minutes, 40 Minutes, 50 Minutes, 60 Minutes, 70 Minutes, 80 Minutes, 90 Minutes, 100 Minutes, 110 Minutes, 120 Minutes, Disable (mixer-amplifier remains ON, does not enter standby mode)

Upon loss of audio at all inputs, a timer starts. At the completion of the timing interval, the mixer amplifier enters the standby mode. All circuits not needed to detect audio presence are shut off. When audio is detected, all circuits turn on and wait for a loss of audio to restart the timing interval. The timer may be disabled if required by system specifications.

ADDING ZONES

EQUALIZATION
Set the switch to EQUALIZED (in) if the front-panel tone controls should affect the line output; Set to FLAT (out) if the tone controls should not affect the line output.

ADDITIONAL ZONE AMPLIFIERS

Connect the LINE OUTPUT to the line input of one or multiple additional RDL amplifiers to permit the Zone 1 mixer to feed other zones. The LINE OUTPUT is not controlled by the master VCA remote control so each additional zone may have its own master level control. The LINE OUTPUT may be set to provide "flat" audio or to allow equalization by the front-panel tone controls. The LINE OUTPUT may also be used to feed recording equipment or an audio distribution amplifier.

OPERATION

TONE CONTROLS
Adjust BASS and TREBLE as desired.

POWER BUTTON
Momentary pushbutton toggles the amplifier between ON and STANDBY.

POWER INDICATOR
Glow dimly when unit is powered in standby (sleep) mode; glows bright when amplifier is on; flashes during power-up.

COMPRESSION INDICATOR
LED flashes when audio compressor is acting on the amplified audio.

MIXER LEVEL 1 - 4
Adjust each level control for the desired output level. If a master remote control is connected, it will adjust the final mixer output level. (Note: If the INPUT 1 VCA Bypass is enabled (See INPUT 1 Settings), a connected remote control will NOT adjust the paging signal on INPUT 1. It will be controlled only by the front panel INPUT 1 level control.)

SIGNAL PRESENT 1 - 4
The green LED glows when audio is present at the input. The indication is not affected by the setting of the mixer level control.

Safety Instructions

Do not remove the cover or rear panel. This unit contains no user serviceable parts inside.

- 1) Read these instructions before operating the unit.
- 2) Keep these instructions.
- 3) Heed all warnings.
- 4) Follow all instructions.
- 5) Do not use this apparatus near water or moisture.
- 6) Clean only with dry cloth.
- 7) Do not block any ventilation openings. Install in accordance with the manufacturer's instructions.
- 8) Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.
- 9) Only use attachments/accessories specified by the manufacturer.
- 10) Unplug this apparatus during lightning storms or when unused for long periods of time.
- 11) Refer all servicing to qualified service personnel. Servicing is required when the apparatus has been damaged in any way, such as if the power-supply or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.
- 12) To completely disconnect this apparatus from the AC mains, disconnect the power supply plug from the AC receptacle.
- 13) WARNING – To reduce the risk of fire or electric shock, do not expose this apparatus to rain or moisture.
- 14) Do not expose this equipment to dripping or splashing and ensure that no objects filled with liquids, such as vases, are placed on the equipment.
- 15) Warning labels may be attached to any surface (including the bottom) of the apparatus.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the product.

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

Instrucciones de seguridad

No quitar la tapa ni la parte posterior del chasis. Dentro del aparato no hay piezas susceptibles de ser reparadas por el usuario.

- 1) Lea estas instrucciones antes de comenzar a usar la unidad.
- 2) Conserve estas instrucciones.
- 3) Atienda todas las advertencias.
- 4) Siga todas las instrucciones.
- 5) No use este aparato cerca del agua o en lugares húmedos.
- 6) Limpie sólo con un paño seco.
- 7) No bloquee ningún orificio de ventilación. Instale de acuerdo con las instrucciones del fabricante.
- 8) No lo instale cerca de ninguna fuente de calor, como radiadores, registros de calefacción, estufas u otros aparatos (incluidos los amplificadores) que produzcan calor.
- 9) Use únicamente aditamentos o accesorios especificados por el fabricante.
- 10) Desenchufe este aparato durante las tormentas eléctricas o cuando no se use durante períodos prolongados de tiempo.
- 11) Refiera todo el servicio a personal cualificado. Se requiere servicio cuando el aparato se ha dañado de cualquier forma, como si se dañan el cable de alimentación o la clavija, si se ha vertido un líquido o han caído objetos al interior del aparato, si el aparato ha estado expuesto a la lluvia o la humedad, no funciona normalmente o ha caído.
- 12) Para desconectar completamente este aparato de la red de CA, desconecte el alimentación eléctrica del receptáculo de CA.
- 13) ADVERTENCIA – Para reducir el riesgo de incendio o descarga eléctrica, no exponga este aparato a la lluvia o la humedad.
- 14) No exponga este equipo a escurrimientos o salpicaduras, y asegúrese de que no se coloquen objetos llenos de líquido, como jarrones, sobre el equipo.
- 15) Las etiquetas de advertencia se pueden sujetar a cualquier superficie (parte inferior incluyendo) del aparato.

El signo de exclamación dentro de un triángulo equilátero alerta al usuario de la existencia de importantes instrucciones sobre funcionamiento y mantenimiento (asistencia) en el manual que acompaña al equipo.

El símbolo del relámpago con punta de flecha, dentro de un triángulo equilátero, alerta al usuario de la presencia de un "voltaje peligroso" sin aislar en el interior del producto, que puede ser de la suficiente magnitud como para constituir un riesgo de descarga eléctrica para las personas.

Consignes de sécurité

N'ôtez pas le couvercle ni le panneau arrière du boîtier. Cet appareil ne contient aucune pièce remplaçable par l'utilisateur.

- 1) Lisez ces instructions avant d'utiliser l'appareil.
- 2) Conservez ces instructions.
- 3) Respectez toutes les mises en garde.
- 4) Suivez toutes les instructions.
- 5) N'utilisez pas cet appareil près d'une source liquide ou dans un lieu humide.
- 6) Nettoyez-le uniquement avec un chiffon sec.
- 7) Ne bloquez pas aucune ouverture de ventilation. Installez l'appareil en suivant les instructions du fabricant.
- 8) Ne l'installez pas à proximité d'une source de chaleur, comme un radiateur, un four ou tout autre appareil (amplificateurs y compris) qui produisent la chaleur.
- 9) Utilisez uniquement les fixations/accessoires agréés par le fabricant.
- 10) Déconnectez l'appareil pendant les orages ou lors de périodes d'inutilisation prolongées.
- 11) Confiez toutes les réparations à un technicien qualifié. Vous devez faire contrôler cet appareil s'il a été endommagé de quelque façon que ce soit, comme lorsque l'alimentation ou les fiches sont endommagés, qu'un liquide ou des objets se sont infiltrés dans l'appareil, qu'il a été exposé à la pluie ou l'humidité, qu'il a subi un choc ou qu'il ne fonctionne pas normalement.
- 12) Pour déconnecter entièrement l'appareil du secteur, déconnectez la fiche de l'alimentation de la prise.
- 13) MISE EN GARDE – Pour réduire les risques d'incendie ou d'électrocution, n'exposez pas cet appareil aux intempéries ou à l'humidité.
- 14) N'exposez pas cet appareil à l'humidité ou aux projections liquides. Ne posez pas de récipient rempli de liquide, tel qu'un vase, sur cet appareil.
- 15) Des étiquettes d'avertissement peuvent être attachées à n'importe quelle surface (y compris le fond) de l'appareil.

Le point d'exclamation au centre d'un triangle équilatéral prévient l'utilisateur de la présence d'instructions importantes dans le mode d'emploi concernant la mise en oeuvre et l'entretien de l'appareil.

L'éclair de foudre fléché au centre d'un triangle équilatéral prévient l'utilisateur de la présence de courants élevés dans l'appareil, pouvant constituer un risque d'électrocution en cas de mise en contact avec les composants internes.

Sicherheitsvorkehrungen

Um die Gefahr eines Stromschlags zu verringern, sollten Sie weder Deckel noch Rückwand des Geräts entfernen. Im Innern befinden sich keine Teile, die vom Anwender gewartet werden können.

- 1) Lesen Sie diese Anweisungen bevor Sie das Gerät in Betrieb nehmen.
- 2) Bewahren Sie diese Anweisungen auf.
- 3) Beachten Sie alle Warnhinweise.
- 4) Befolgen Sie alle Anweisungen.
- 5) Benutzen Sie die Vorrichtung nie in der Nähe von Wasser oder Feuchtigkeit.
- 6) Nur mit trockenem Tuch reinigen.
- 7) Belüftungsöffnungen nicht blockieren. Den Anweisungen des Herstellers entsprechend installieren.
- 8) Installieren Sie die Vorrichtung nicht in der Nähe von Wärmequellen wie Radiatoren, Heizkörpern, Herden oder anderen Geräten (insbesondere Verstärkern), die Wärme erzeugen.
- 9) Verwenden Sie nur vom Hersteller zugelassenes Zubehör.
- 10) Ziehen Sie bei Gewittern oder bei längeren Stillstandzeiten den Netzstecker des Geräts.
- 11) Überlassen Sie alle Wartungsarbeiten qualifiziertem Personal. Ein Service wird erforderlich, wenn das Gerät in irgendeiner Weise beschädigt wurde, beispielsweise bei Beschädigung des Netzteils oder des Netzkabels, wenn Flüssigkeiten über das Gerät vergossen wurden oder Gegenstände in das Gerät gefallen sind, das Gerät Regen oder Feuchtigkeit ausgesetzt war, nicht ordnungsgemäß funktioniert oder fallen gelassen wurde.
- 12) Ziehen Sie den Netzstecker aus der Steckdose, um das Gerät vollständig vom Wechselstromnetz zu trennen.
- 13) WARNHINWEIS: Um die Gefahr vom Feuer oder Stromschlag zu vermeiden, darf das Gerät nicht Regen oder Feuchtigkeit ausgesetzt werden.
- 14) Lassen Sie nicht zu, dass Flüssigkeiten auf das Gerät tropfen oder gespritzt werden können, und achten Sie darauf, dass keine mit Wasser gefüllten Gegenstände wie Vasen auf das Gerät gestellt werden.
- 15) Warnaufkleber können sich an beliebiger Stelle (inklusive Unterseite) am Gehäuse des Apparates befinden.

Das Ausrufezeichen im gleichseitigen Dreieck soll den Anwender auf wichtige Bedienungs- und Wartungsanleitungen aufmerksam machen, die im mitgelieferten Informationsmaterial näher beschrieben werden.

Der Blitz mit Pfeilspitze im gleichseitigen Dreieck soll den Anwender vor nichtisolierter "gefährlicher Spannung" im Geräteinnern warnen. Diese Spannung kann so hoch sein, dass die Gefahr eines Stromschlags besteht.
