

Physical Social Distancing

Manufacturing with ListenTALK

Problem

We understand how difficult times are for those sheltering in place as well as the challenges factories face with physical distancing and maske wearing requirements. Communication is essential to safety and productivity and can be more difficult with physical distance and muffled speech from masks.

Challenge

Many factories are quickly realizing that the same physical distancing measures that are keeping their employees healthy are also putting their safety, communication, and productivity at risk. Do not let your COVID-19 prevention measures affect your high safety standards or get in the way of your productivity.

ListenTALK is designed to fit your needs, allowing you, and your employees to safely communicate in any environment while maintaining physical distancing standards.

Solution

ListenTALK is a mobile two-way communication system, allowing teams to maintain a safe distance while still doing the work required to keep business running. The wireless system features a sleek, wearable transceiver (combination transmitter/receiver) that enables mobile group communication with the touch of a button. ListenTALK is the long-term solution as your staff adjusts to new safety standards and practices.

Results

- Communicate clearly, with a minimum 6-foot distance
- Eliminates barriers including distance, face masks, background noise, and hearing loss
- Easy to set up, use, and sanitize

“We are finding ListenTALK very useful right now to assist with social distancing while we try to do training on the floor.”

— Corinne Dobbins

Environmental Health & Safety Manager, ConAgra Foods
