

MIXPACK10 All-in-one Portable Sound System

Your Requirement: You need a high-performance PA system with serious power, gutsy speakers and comprehensive input/mixing capability so you can handle a good-sized ensemble.

Your Big Concern: You have a limited budget and you don't have the room to haul around a big, complicated setup.

Your Answer: The Alto MixPack 10

Here is a truly high-performance sound system with the wattage muscle, acoustic firepower and the input/mixing flexibility to handle virtually any situation.

First of all, we give you the power you need: 400 high-output watts driving full-sized speakers with potent 10-inch woofers and 1-inch high-frequency compression drivers. These are not some weak-kneed 6 1/2-inch or 8-inch speakers. These are the real deal, backed by some significant power.

Then we give you an 8-channel mixer with EQ and multiple inputs so you can take command of a good-sized group and make it sound exactly the way you want.

We include all your cables and accessories and everything stows for travel as conveniently as you can imagine. This is what you're looking for!

All information is preliminary and subject to change.

FEATURES
