**Small and powerful**

In such a compact space, built-in lithium-ion batteries provide you with five hours of usage and a stable wireless technology. A durable metal case can be adapted to various situations.

**APPLICATION SCENE**

**2.4GHz—Free from Interference**

What's the best way to avoid interference? X3vive U3 digital wireless systems broadcast in the 2.4GHz band, which successfully avoids interference caused by TV stations, public safety broadcasts, cell phone towers, and other high-powered sources. Some environments are more difficult than others for 2.4 GHz wireless system performance. But still we would suggest you keep the system 3 meters away from Wifi router or other wireless system around; And close to your receiver.
