

DMX Lighting Cable

Cool Cable™ lighting control cables are true high quality DMX cables with exceptionally durable and flexible construction. They meet the USITT standards for DMX512 cable specifications—120 ohm impedance, low capacitance, and double (foil and braid) shield.

Unlike conventional cables that are not intended for data transmission, Cool Cable™ DMX cables offer reliable data transfer through its data-specific design, and wire that is wrapped 5 times tighter than any traditional microphone cable.

In addition, Cool Cable™ DMX cables feature an extra-flexible jacket material that is tough, abrasion-resistant, and remains flexible in hot or cold temperature environments.
