

Bluetooth VoiceSaver Quick Start Guide

Model PA283

The Voicesaver and its dedicated Bluetooth headset each need to be fully charged before use. Insert the included 4AA rechargeable Li-ion batteries into the battery compartment of the Voicesaver. Make sure the polarity of the batteries matches the diagram inside the battery compartment. Before its first use, charge the PA overnight. Its LED will change from red to blue once fully charged. Successive charges can be done in four hours and two-hours for the headset.

Turning the Unit On

Once charged, first disconnect the PA283 from the charger and then turn it on. The VoiceSaver will make a beeping sound indicating it's searching for its wireless headset. (The beeping won't sound if the optional wired PAM283 headset is plugged in.) the LED will flash twice in 3 seconds once connection is made.

Disconnect its Bluetooth headset from charging. Depress the button in the middle of the earcup for at least 5 seconds to turn the headset on. Once on, the light above the earcup will flash between blue and red. When it has warmed up and has automatically paired with the PA283, the unit will beep and the light will stay blue.

Operations

Once synced, the headset has a 30' range to the PA, enabling a user to move about without having to wear the PA283.

Volume Control

Volume can be adjusted on the PA itself and also with the buttons on the headset to increase or lower the volume.

NOTE: This product has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This product generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If the product does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures : -Reorient or relocate the receiving antenna. -Increase the separation between the product and receiver. - Connect the product into an outlet on a circuit different from that to which the receiver is connected. -Consult the dealer for help.
